Project Title: HR Recruitment Information System – Business Process Analysis

Organization

NovaTech Solutions

Business Process

Employee Recruitment and Selection

Process Description

The recruitment process begins when a department identifies a need for a new employee. The hiring manager submits a recruitment request to the HR department. After approval, HR prepares and publishes the job vacancy through appropriate recruitment channels.

Applicants submit their applications and CVs, which HR reviews and screens based on the job requirements. Suitable candidates are shortlisted and forwarded to the hiring manager. Selected candidates are invited for interviews, after which interviewers provide feedback and a hiring decision is made.

If a candidate is selected, HR prepares and sends a job offer. Once the candidate accepts the offer, the recruitment process is completed and the candidate moves into the onboarding process.

Key Stakeholders

Stakeholder	Role in Process
HR Recruiter	Manages recruitment activities and candidate records
Hiring Manager	Requests employees and participates in candidate selection
HR Manager	Reviews/approves recruitment requests
Candidate	Applies for vacancies and participates in interviews
Interviewer	Conducts interviews and provides feedback
Department Head	Provides approval for hiring when required

Current Recruitment Process — High-Level

Then add these numbered steps:

1. Department identifies a staffing requirement.
2. Hiring Manager submits a recruitment request.
3. HR Manager reviews and approves the request.
4. HR creates the job vacancy.
5. Job is posted on recruitment channels.

6. Candidates submit applications and CVs.
7. HR reviews applications.
8. HR shortlists suitable candidates.
9. Shortlisted candidates are sent to the Hiring Manager.
10. Interviews are scheduled.
11. Interviewers evaluate candidates.
12. Hiring Manager makes the final selection.
13. HR prepares and sends the job offer.
14. Candidate accepts or rejects the offer.
15. Selected candidate proceeds to onboarding.

2. Current Recruitment Process

NovaTech Solutions currently follows a largely manual recruitment process for hiring employees across its various departments. The process involves coordination between department heads, hiring managers, the Human Resources (HR) department, interviewers, and candidates.

At present, recruitment information is managed through a combination of emails, spreadsheets, documents, online job platforms, and verbal communication. Although this approach allows the organization to complete its recruitment activities, it creates several inefficiencies as the number of vacancies and applicants increases.

2.1 Current Process Steps

The existing recruitment process consists of the following stages:

1. **Identify Staffing Requirement**
A department identifies the need for a new employee because of a new position, employee turnover, workload increase, or business expansion.
2. **Submit Recruitment Request**
The hiring manager communicates the staffing requirement to HR and provides information about the required position.
3. **Review and Approve Request**
The HR Manager and relevant department authority review the request and determine whether recruitment should proceed.
4. **Prepare Job Vacancy**
HR prepares the job description, required qualifications, skills, experience, and other position details.
5. **Publish Job Vacancy**
The vacancy is posted through appropriate recruitment channels such as online job platforms, the company website, or social media.
6. **Receive Applications**
Candidates submit their applications and CVs through the available recruitment channels.
7. **Review Applications**
HR reviews candidate applications and CVs to determine whether applicants meet the basic requirements of the position.
8. **Shortlist Candidates**
Candidates who meet the required criteria are shortlisted for further evaluation.

9. Forward Shortlist to Hiring Manager

HR shares shortlisted candidates with the relevant hiring manager for review.

10. Schedule Interviews

HR coordinates with candidates and interviewers to arrange interview dates and times.

11. Conduct Interviews

Candidates participate in one or more interviews with HR, the hiring manager, or other relevant interviewers.

12. Evaluate Candidates

Interviewers assess candidates and provide feedback regarding their qualifications, skills, experience, and suitability for the position.

13. Make Hiring Decision

The hiring manager and HR review the available information and select the most suitable candidate.

14. Prepare and Send Job Offer

HR prepares the employment offer and communicates it to the selected candidate.

15. Candidate Accepts or Rejects Offer

The candidate either accepts or rejects the offer. If accepted, HR proceeds with the necessary hiring and onboarding activities.

2.2 Problems Identified in the Current Process

Analysis of the existing recruitment process reveals several operational and information-management problems.

No.	Problem Identified	Impact on the Organization
1	Candidate information is stored across different files, emails, and platforms.	HR may spend unnecessary time searching for candidate information.
2	CV screening is primarily performed manually.	Screening large numbers of applications can be time-consuming.
3	Candidate status is not centrally tracked.	HR may have difficulty determining the current stage of an application.
4	Communication between HR and hiring managers is decentralized.	Important updates may be delayed or overlooked.
5	Interview scheduling is handled manually.	Scheduling conflicts and delays may occur.
6	Interview feedback may be stored in separate documents or emails.	Comparing candidates becomes more difficult.
7	Vacancy information is not maintained in one centralized system.	Management has limited visibility into open and completed vacancies.
8	Recruitment reports require manual preparation.	Generating accurate recruitment statistics takes additional time.
9	Candidate information may be entered more than once.	Duplicate or inconsistent records can occur.

No.	Problem Identified	Impact on the Organization
10	Recruitment performance is difficult to monitor.	Management cannot easily evaluate recruitment efficiency or identify bottlenecks.

2.3 Key Business Issues

Based on the analysis, the main business issues associated with the current recruitment process are:

Data Fragmentation

Candidate and vacancy information is distributed across multiple files, emails, and recruitment platforms rather than being maintained in a centralized information system.

Manual Workload

HR personnel spend considerable time performing repetitive activities such as reviewing applications, updating spreadsheets, communicating candidate statuses, and preparing reports.

Limited Process Visibility

There is no single location where HR and management can view the complete status of vacancies, applications, interviews, and offers.

Communication Gaps

The absence of a centralized system can make communication between HR, hiring managers, interviewers, and other stakeholders less efficient.

Difficulty in Candidate Comparison

Interview results and candidate evaluations may be stored separately, making it harder for decision-makers to compare candidates objectively.

Reporting Limitations

Recruitment statistics such as number of applicants, shortlisted candidates, interview outcomes, time-to-hire, and hiring rates require manual compilation.

Data Accuracy Risks

Manual data entry and duplicate records increase the possibility of incomplete, outdated, or inconsistent recruitment information.

2.4 Need for an Information System

The identified problems demonstrate the need for a centralized HR Recruitment Information System.

The proposed system would provide a single platform for managing recruitment information and activities from the creation of a vacancy through candidate selection and offer management.

The system would allow authorized users to create and manage vacancies, store candidate information, track applications, manage interview schedules, record interview feedback, update candidate statuses, and generate recruitment reports.

By centralizing recruitment information and automating selected activities, the proposed system can improve process visibility, reduce administrative workload, improve data consistency, and support faster and more informed recruitment decisions.

2.5 Conclusion

The analysis of NovaTech Solutions' current recruitment process indicates that the organization relies heavily on manual and decentralized methods for managing recruitment activities. While the existing process allows vacancies to be filled, the lack of a centralized information system creates inefficiencies in candidate management, communication, interview coordination, data tracking, and reporting.

These challenges highlight the need for a centralized HR Recruitment Information System that can integrate recruitment activities into a single, structured platform. The proposed system will aim to improve information management, process visibility, communication, data accuracy, and overall recruitment efficiency.

The following sections of this project will analyze and design the proposed solution, including its improved process flow, system functionality, use cases, database structure, requirements, and expected business benefits.

3. Proposed HR Recruitment Information System

3.1 System Overview

The proposed HR Recruitment Information System is a centralized information system designed to manage and streamline the employee recruitment process at NovaTech Solutions.

The system will provide a single platform through which HR personnel, hiring managers, interviewers, and candidates can interact with recruitment information and activities. Instead of relying on separate spreadsheets, emails, documents, and manual records, recruitment data will be stored and managed within a structured system.

The proposed system will support the recruitment process from the initial creation of a job vacancy through application management, candidate screening, interviews, selection, and job offers.

The system is intended to improve the efficiency, accuracy, visibility, and coordination of recruitment activities while providing management with better access to recruitment information and performance reports.

3.2 System Objectives

The main objectives of the proposed HR Recruitment Information System are to:

1. Centralize candidate and vacancy information in a single system.
2. Reduce the amount of manual work involved in recruitment activities.
3. Provide HR personnel with an organized method for tracking candidates throughout the recruitment process.
4. Improve communication and coordination between HR personnel, hiring managers, and interviewers.
5. Maintain structured records of applications, interviews, evaluations, and job offers.
6. Reduce duplicate and inconsistent recruitment records.
7. Improve the visibility of vacancy and candidate statuses.
8. Provide recruitment reports and useful performance information to management.
9. Support faster and more informed hiring decisions.
10. Improve the overall efficiency and consistency of the recruitment process.

3.3 System Users

The proposed system will have several types of users, each with different responsibilities.

User	Responsibilities
Candidate	Creates a profile, views vacancies, submits applications, tracks application status, and responds to interview or offer notifications.
HR Recruiter	Creates vacancies, reviews applications, manages candidate records, shortlists candidates, schedules interviews, manages offers, and updates recruitment statuses.
Hiring Manager	Submits recruitment requests, reviews shortlisted candidates, participates in selection decisions, and provides hiring-related input.
Interviewer	Views assigned interviews, evaluates candidates, and submits interview feedback through the system.
HR Manager / Administrator	Approves recruitment requests, manages system information, monitors recruitment activities, and generates management reports.

3.4 Core System Functions

The proposed system will provide the following major functions:

1. User and Candidate Management

The system will maintain structured profiles for candidates and authorized system users. Candidate profiles may contain personal contact information, qualifications, skills, experience, and application history.

2. Job Vacancy Management

HR personnel will be able to create, update, publish, and close job vacancies. Each vacancy will contain information such as job title, department, required qualifications, required skills, experience requirements, and vacancy status.

3. Recruitment Request Management

Hiring managers will be able to submit recruitment requests through the system. Authorized HR personnel will review and approve or reject these requests before a vacancy is created.

4. Application Management

Candidates will be able to submit applications for available positions. The system will associate each application with the relevant candidate and job vacancy.

5. Candidate Screening and Shortlisting

HR personnel will be able to review applications and record screening decisions. Candidates who meet the required criteria can be moved to the shortlist.

6. Interview Management

HR personnel will be able to schedule interviews and assign interviewers. Interview details will be stored in the system so that relevant users can access the information.

7. Interview Evaluation

Interviewers will be able to record candidate evaluations and feedback directly in the system. This information can then be reviewed by HR and hiring managers during the selection process.

8. Candidate Selection

HR and hiring managers will be able to update the status of candidates based on the selection decision. Candidates who are not selected can be marked as rejected, while the selected candidate can proceed to the offer stage.

9. Job Offer Management

HR personnel will be able to create and track job offers, including offer date, proposed salary, offer status, and candidate response.

10. Recruitment Tracking

The system will maintain the current status of every application, allowing HR personnel to determine whether a candidate is under review, shortlisted, interviewed, selected, rejected, or offered a position.

11. Notifications and Communication

The system can provide notifications to relevant users regarding application updates, interview schedules, recruitment decisions, and job offers.

12. Reporting and Analytics

The system will generate recruitment reports that can help management monitor vacancies, applications, shortlisted candidates, interviews, hiring outcomes, and other recruitment performance indicators.

3.5 Proposed Information Flow

The proposed system will create a centralized flow of recruitment information.

The process will begin when a hiring manager submits a recruitment request through the system. After approval, HR will create and publish the vacancy. Candidates will submit their applications through the system, and their information will automatically be associated with the relevant vacancy.

HR will then review and screen applications, shortlist suitable candidates, and arrange interviews through the system. Interviewers will record their evaluations electronically, allowing HR and hiring managers to review candidate information in one location.

Once a candidate is selected, HR will create the job offer and record the candidate's response. If the offer is accepted, the candidate will be marked as hired and the information can be transferred to the onboarding stage.

Throughout the process, the system will maintain a centralized record of recruitment activities and provide authorized users with up-to-date information.

3.6 Expected System Outcome

The proposed HR Recruitment Information System is expected to transform the existing recruitment process from a fragmented and largely manual process into a more centralized, structured, and trackable information system.

The system will not only store recruitment data but will also support the flow of information between the different stakeholders involved in hiring. This will allow NovaTech Solutions to manage recruitment activities more efficiently while providing management with improved visibility into the organization's hiring process.
